

## 24TRACC® Supply Chain Technology Goes Mobile

Armada recently released 24TRACC® mobile edition — a real-time technology platform by Armada that provides our clients with end-to-end visibility across their supply chain and enables responsiveness and flexibility in their network to meet changing demands. The app gives clients views of their distribution channels, inventory levels, product movement and product costs — all in the palm of their hands.

*24TRACC* enables clients to define and to view their supply chain in a comprehensive, holistic manner — ensuring visibility from beginning to satisfied customer. It allows for the efficient execution of supply chain activities and enables proactive decision making.
